

February 1, 2024

Canadian Institute for Synchrotron Radiation (CISR) is proud to sponsor the symposium **Frontiers of Electron and X-ray Spectroscopy** at the [Canadian Chemistry Conference and Exhibition \(CSC 2024\)](#) in Winnipeg, Manitoba, June 2-6, 2024.

The symposium will cover state of the art developments in electron and X-ray spectroscopy, including instrumental innovation, fundamental studies in the field of electron energy loss spectroscopy, non-dipole processes, photofragmentation, near edge X-ray absorption fine structure spectroscopy, X-ray microscopy and spectromicroscopy, in situ, operando and tomographic microscopy, applications to materials science and technology, and industrial partnerships that help build new research capabilities.

This symposium will also honour the career of [Adam Hitchcock](#), and his foundational contributions to electron and X-ray spectroscopy and X-ray spectromicroscopy. Adam was a charter member of the original incarnation of CISR, and continues to lead and mentor research at the frontiers of electron and X-ray spectroscopy and spectromicroscopy.

The deadline to submit an abstract is February 6, 2024.
